

# Plug & Light: new covers for ceiling and pendant lights

More freedom for mounting: JUNG expands the possibilities to install Plug & Light. With the new frame and the surface-mounted housing, a uniform mounting is possible.

The light socket with bayonet fitting can securely hold ceiling and pendant luminaires with a weight of up to 1.5 kilogrammes. With the new frame and the surface-mounted housing, a uniform mounting is easily possible.

The basis of the LED system behind Plug & Light is formed by the flush-mounted insert with the electronics, a frame, the light socket and the light attachment. JUNG provides compatible frames and covers for Plug & Light. The light attachment is held in place on the light socket by a strong magnet. Three gold-plated sliding contacts provide the necessary electrical connection. Alongside the energy provision, the sliding contacts regulate the dimming process together with the cover and light socket. Plug & Light enables easily controllable light in interiors.

## An open network

More freedom for mounting: JUNG expands the possibilities to install Plug & Light. With the new frame and the surface-mounted housing, a uniform mounting is possible.

The dimmable LED luminaires from Plug & Light are versatile: Plug & Light continuously showcases itself with new functions, outstanding lighting designs and a constantly growing network of manufacturers. New luminaires regularly extend the offering. After the pendant, ceiling and wall lights from Brumberg and Ingo Maurer, JUNG is pleased to present more manufacturers of Plug & Light light attachments. As new cooperation partners, Axolight, COR, Grossmann, NYTA and SG now also offer design lights for Plug & Light. With Orbittu, Axel Schmid and David Engelhorn from the design team of Ingo Maurer recently showed how Plug & Light redefines the lighting in interiors. The hemispherical wall or ceiling light with side light emission is reminiscent of a miniature observatory. Other manufacturers are invited to use the system to design their own luminaires. More flexible lighting design is hardly possible.
